PROFESSIONAL SUMMARY

Full-Stack Developer and current full-stack web development and AI intern with a B.S. in Computer Science, building secure, production-style applications across JavaScript/TypeScript and Python stacks. Delivers multi-tenant systems, role-based access, concurrency-safe workflows, bilingual interfaces, and automated validation. Leads collaborative delivery from architecture and task planning through review, testing, and deployment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
Frontend: React, Next.js, Vue 3, Nuxt 4, Zustand, TanStack Query, Tailwind CSS, SSR, CSR, SSG, PWA, Core Web Vitals, SEO, i18n/RTL
Backend, Data & Security: Node.js, Express.js, FastAPI, Django REST Framework, RESTful APIs, MySQL, PostgreSQL, MongoDB/Mongoose, Supabase, SQL/NoSQL, JWT, secure cookies, RBAC, RLS
Testing & Architecture: Jest, Vitest, pytest, React Testing Library, unit/integration testing, SOLID, clean architecture, design patterns, scalable system design
Delivery & AI: Git/GitHub, Jira, branching, pull requests, code reviews, GitHub Actions, CI/CD, Docker Compose, Postman, Vercel, Render, Cloudflare; LLMs, prompt engineering, AI/Cognitive API integration; review-led Codex/Aider

EXPERIENCE

Full-Stack Web Development & AI Intern | The Digital Hub, UNRWA | May 2026-Present (expected completion and certificate: October 2026)

- Completing an intensive full-stack web development and AI internship centered on modern software architecture and production-ready applications using React, Next.js, TypeScript, Vue/Nuxt, Node.js, Express.js, FastAPI, and Django REST Framework.
- Build relational and NoSQL data layers with MySQL, PostgreSQL, and MongoDB/Mongoose; implement CRUD, schema validation, JWT authentication, secure cookies, RBAC, and end-to-end MERN and Python-stack integration.
- Apply SOLID, clean architecture, reusable components, Agile/Scrum, Git branching and pull-request workflows, Jira, Jest/Vitest, GitHub Actions/CI/CD, Vercel/Render deployment, plus LLM, prompt-engineering, and AI/Cognitive API integrations.

SELECTED PROJECTS

ChargeHub - Primary Full-Stack Developer (Team Project) | 2026 | **GitHub**
Next.js, TypeScript, MongoDB Atlas, Mongoose, Tailwind CSS

- Engineered duration-aware EV charging reservations across separate Next.js client and API applications, including an 11-state lifecycle, QR check-in, station-scoped access, deposits/refunds, and operational dashboards.
- Built concurrency-safe occupancy atoms with unique database indexes, deterministic multi-request scheduling, incident/delay/extension/overstay engines, idempotent event consumers, and 31 KPIs; achieved 182/182 database-backed verification checks.

Tawzeevo - Sole Developer & Product Owner | 2026-Present | **GitHub**
FastAPI, Python, PostgreSQL, SQLAlchemy, React, Vite, TypeScript

- Architected a bilingual multi-tenant Cash Van SaaS with Argon2id/JWT authentication, rotating sessions, tenant onboarding, RBAC, customer/catalog management, draft invoicing, and PostgreSQL RLS; validated 70 backend tests, 94% statement coverage, 10 frontend tests, strict typing, lint/build, and migration-from-zero checks.

Interview Lab - Sole Developer | 2026 | **GitHub**
React, TypeScript, Supabase/PostgreSQL, IndexedDB, Edge Functions, PWA

- Built an offline-first study PWA for Digital Hub colleagues with 200 full-stack lessons, spaced repetition, IndexedDB sync, and adaptive 20-item Rasch EAP assessments; protected server-only answer keys and personal data with Auth/RLS, consent, idempotency, Turnstile, leakage checks, and sanitized leaderboards.

InsightFlow - Project Lead & Full-Stack Developer (5-Person Team) | 2026 | **GitHub**
Nuxt 4, Vue 3, TypeScript, MongoDB Atlas, Zod

- Planned three delivery phases, assigned code ownership, integrated team contributions, and developed high-risk flows for CSV sales uploads, recommendations, forecasting, public insights, account-scoped data, privacy, idempotent seeding, and release verification.

OptiCart - Project Lead & Full-Stack Developer (3-Person Team) | 2026 | **GitHub**
MongoDB, Express, React, Node.js, TypeScript

- Co-led a MERN e-commerce platform with secure access/refresh authentication, role-based administration, catalog/cart/coupons, Stripe-shaped checkout and webhooks, atomic inventory updates, audit logs, email notifications, and scheduled recommendations.

EDUCATION & LANGUAGES

Bachelor of Science in Computer Science | Lebanese International University, Saida | 2016-2020
Languages: Arabic (Native), English (Fluent)
